

HITCH DEVICE FOR ATTACHING FARM IMPLEMENTS TO A TRACTOR

ABSTRACT OF THE INVENTION

5

A farm implement of a tractor is hitched to two lift arms, each of which is moved by a respective actuating cylinder having two chambers connected to a feed circuit supplying a pressurized fluid; the feed circuit having, for each chamber, two feed lines for feeding the fluid to and from the chamber
10 respectively, and four independent valves, each located along one of the feed lines and movable between a closed position and at least one open position respectively closing and opening the relative feed line.
